

# SPAR FINISH

— PREMIUM —

## INTERIOR & EXTERIOR

### *Durable, Clear Protective Coating*

- Contains U.V. absorbers to help prevent fading and discoloration
- Helps protect against rain, sun, and wind damage
- Flexible finish expands and contracts with wood as the temperature changes to help resist cracking, peeling, and blistering
- 100% urethane formula provides added protection
- Ideal for use on stained or unfinished wood surfaces including doors, patio furniture, trim, garage doors, and more
- Produces a durable, protective coating
- Available in satin and gloss sheens

# OLYMPIC® PREMIUM INTERIOR & EXTERIOR SPAR FINISH

## PRODUCT OVERVIEW

Olympic Premium Interior/Exterior Spar Finish is a clear, durable 100% urethane formula designed to provide added protection from water, sun and wind damage. This unique formulation gives your wood a clear premium protective coating and contains U.V. absorbers, which help to prevent staining and discoloration caused by the damaging effects of the sun.

## APPLICATION TECHNIQUES

Olympic Premium Interior/Exterior Spar Finish should be applied with a quality natural bristle brush or foam applicator. Its unique formula helps make smooth, even application easier than ever. However, a few simple tips will help ensure a professional finish:

- Never shake the can. Stir slowly to avoid creating air bubbles.
- Slowly work the finish into the wood with light, even strokes.
- The last stroke should be at a 45° angle with the brush and run the entire length of the work surface. This technique will remove any bubbles that may be trapped in the finish.

## ADDITIONAL INFORMATION

Dry time: 8-24 hours before general use

Recoat: After 5 hours

Clean-up: Mineral spirits or paint thinner

Coverage: 100-150 sq. ft. per quart

For use on: Stained, sealed, or bare wood

Ideal for: Doors, patio furniture, trim, garage doors, shutters, bar tops, and more

Sheens: Satin and gloss

## PRODUCTS

Product	Code	Available Size
Clear Satin	41846	Quart & Gallon
Clear Gloss	41844	Quart & Gallon

## COMMONLY ASKED QUESTIONS

**How does Olympic Premium Interior/Exterior Spar Finish differ from the Olympic Premium Interior Oil Based Polyurethane?** Olympic Premium Interior/Exterior Spar Finish is an oil based polyurethane formulated for interior and exterior use. It contains specialty additives to help block U.V. light. In addition, the resins used in this formula have been selected because they stand up better in the harsh exterior environment. They protect areas exposed to sunlight, such as windows, doors, trim, etc.

**Why is it important that the finish coat be flexible?** Hard, brittle coatings will crack and peel when the wood expands and contracts with heat and moisture. If the coating won't flex with the wood, the coating will crack.

**Which of nature's elements does the product protect against?** It reduces U.V. light damage, guards against water absorption, and helps protect against marring.

**How many coats are recommended for maximum protection?** Two or three coats are recommended, depending on the application and substrate. The last coat should be a clear, continuous film and should not soak into the wood.

**Can Olympic Premium Interior/Exterior Spar Finish be applied over Olympic Premium oil based stain products?** Yes. Olympic Premium Interior/Exterior Spar Finish can be used over any penetrating oil based product. Make sure the surface is clean prior to applying Olympic Premium Interior/Exterior Spar Finish.

**How often will I need to recoat?** That depends on the weather conditions at your location. When you first see chipping or erosion, the wood should be recoated. Typically this is yearly for exterior surfaces. Interior surfaces will hold up considerably longer, since their exposure to exterior weather conditions is indirect.
